

IN THE CLAIMS

Please amend the claims as follows:

Claims 1-22 (Canceled).

Claim 23 (Currently Amended): A payment system for controlling continued use of a software program by a user, comprising:

a terminal configured to access software stored on a computer readable storage linked thereto, ~~[[and]]~~ the terminal including

control means for periodically determining a payment for continued use of the software ~~analyzing conditions~~ based on previous use of the software ~~to determine whether a further payment relating to the software is required for continued use,~~

the terminal being ~~[[and]]~~ configured to generate and transmit an offer ~~a first~~ message, ~~which is an offer message,~~ containing at least an identity of ~~[[the]]~~ a software owner, offer parameters and a digital signature of the software owner for at least part of the offer parameters;

a payment module linked to the terminal and configured to receive the offer ~~first~~ message, display the offer ~~first~~ message, receive an acceptance from ~~[[of]]~~ the software user, ~~compose~~ generate a payment request ~~second~~ message requesting payment, the payment request message including ~~which includes~~ at least the identity of the user and of the software owner together with proof of the user acceptance, and configured to transmit the payment request ~~second~~ message; and

a message and payment processing system configured to receive the payment request ~~second~~ message, verify the proof of user acceptance, record the payment request with at least the identity of the user and of the software owner and the amount to be paid, credit the owner with the amount to be paid, the message and payment processing system generating

~~configured to compose a payment settlement third message which serves as a payment settlement message, the third message~~ containing at least the identity of the message and payment processing system and a digital signature for proof of payment; and to transmit the payment settlement third message therefrom,

wherein the payment module is configured to receive the payment settlement third message and to transmit to the ~~control~~ means for determining of the terminal, the ~~control~~ means for determining verifying the digital signature for proof of payment relative to the offer parameters of the offer first message and authorizing continued use of the software program upon verification.

Claim 24 (Currently Amended): The system in accordance with claim 23, wherein ~~whereby~~ the digital signature of the owner of at least part of the offer, and the digital signature for proof of payment are both public key signatures with certification trees, so that an authority defines a root of the certification tree containing different system participants, including a software owner and the message and payment processing system, and one or more certificates are attached to the offer first and payment settlement third messages for signature checking.

Claim 25 (Currently Amended): The system in accordance with claim 23, wherein ~~whereby~~ the message and payment processing system further comprises:

a remote payment server linked to the payment module by a telecommunications network, and ~~whereby~~ said remote payment server receives and processes the payment request second message and composes and sends the payment settlement third message; the remote payment server calculates a total consumption of each user for all software owners in

order to impose payment by said user and causes the sums owned to each software owner to be transferred by all of the users.

Claim 26 (Currently Amended): The system in accordance with claim 23, wherein ~~whereby~~ the message and payment processing system further comprises:

secure means for receiving the payment request message, the secure means containing at least the identity of the user; ~~said means are additionally able to receive the second message, the secure means checking check~~ the proof of the user acceptance, the secure means recording record the payment request and composing compose the ~~third message,~~ payment settlement message, the secure means transferring transfer the payment settlement ~~third~~ message, and also includes the secure means including a remote payment server ~~able to credit~~ the software owner.

Claim 27 (Currently Amended): The system in accordance with claim 26, wherein ~~whereby~~ the secure means include a smart card reader with a smart card containing the identity of the user ~~user's identity, and whereby~~ the reader and card receiving ~~are able to receive the second~~ payment request message, checking check the proof of the user acceptance, recording record the payment request and ~~compose the third~~ generating the payment settlement message.

Claim 28 (Currently Amended): The system in accordance with claim 27, wherein ~~whereby~~ the card is ~~[[of]]~~ a prepaid card type and contains a balance and ~~whereby~~ the card debits ~~is able to debit~~ the balance with the request amount at each payment request.

Claim 29 (Currently Amended): The system in accordance with claim 28, wherein ~~whereby the~~ a prepay card message is inserted ~~insert~~ into the payment settlement ~~third~~ message as proof that the requested amount has been debited from the card.

Claim 30 (Currently Amended): The system in accordance with claim 28, wherein ~~whereby the~~ prepay card updates ~~is able to update~~ a file containing settled requests and corresponding amounts, and ~~whereby the~~ payment settlement message is sent upon update of ~~the once this~~ file ~~has been updated~~.

Claim 31 (Currently Amended): The system in accordance with claim 30, wherein ~~whereby the~~ prepaid card transfers ~~is able to transfer~~ the file to the remote payment server, the remote payment server ~~[[for]]~~ transferring funds to the software owners.

Claim 32 (Currently Amended): The system in accordance with claim 28, wherein ~~whereby the~~ prepay card is an ~~of the~~ electronic wallet card ~~type~~.

Claim 33 (Currently Amended): The system in accordance with claim 27, wherein ~~whereby the~~ card is ~~[[of]]~~ a post-pay card ~~type~~.

Claim 34 (Currently Amended): The system in accordance with claim 33, wherein ~~whereby the~~ post-pay card updates ~~update~~ a file containing settled requests and corresponding amounts, and ~~whereby the~~ payment settlement message is sent upon update of the ~~once this~~ file ~~has been updated~~.

Claim 35 (Currently Amended): A system in accordance with claim 34, wherein
~~whereby~~ the file is transferred to the remote payment server, the remote payment server
transferring funds to the software owners.

Claim 36 (Currently Amended): A payment method for controlling continued use of
a software program by a user, comprising:

periodically determining a payment for continued use of the software analyzing
~~conditions~~ based on previous use of the software ~~to determine whether a further payment~~
~~relating to the software is required for continued use;~~

generating an offer ~~a first message, which is an offer message~~, containing at least
identity of the software owner, offer parameters and the owner's digital signature for at least
part of the offer; ~~and transmission of the said first~~

transmitting the offer message to a payment module of ~~[[the]]~~ a terminal storing the
software;

~~reception and display~~ receiving and displaying, under control of ~~[[by]]~~ the payment
module, the offer of said first message;

~~reception by~~ receiving, at the payment module, ~~[[of]]~~ an acceptance ~~[[of]]~~ from the
user; ~~[[and,]]~~

~~composition by~~ generating, at the payment module, a payment request of a second
message requesting payment, following the user acceptance, the payment request message
containing at least identity of the user and of the software owner together with proof that the
user accepts the offer;

~~transmission~~ transmitting, by said module, ~~of said second~~ the payment request
message to a message and payment processing system;

~~reception by~~ receiving, at the payment module, a payment settlement of a third
message, ~~which is a payment settlement message~~, from the ~~processing means of~~ message and
payment processing system, ~~[[;]]~~ the ~~third~~ payment settlement message containing at least the
identity of the message and payment and a digital signature constituting proof of payment;

~~transmission~~ transmitting, by the payment module, the payment settlement of said
~~third~~ message to control means of the terminal;

verifying, by the control means, ~~[[of]]~~ the digital signature constituting proof of
payment against the offer parameters contained in the offer ~~first~~ message; and

~~authorization of continuation~~ authorizing continued ~~of the~~ use of the software
program upon correct verification.

Claim 37 (Currently Amended): A terminal for enabling control of the continued use
of a software program the terminal comprises:

control means for periodically determining a payment for continued use of the
software ~~analyzing conditions~~ based on previous use of the software, the control means ~~to~~
~~determine whether a further payment is required for continued use; for and for~~ generating an
offer ~~a first~~ message offering use of the software and ~~said first message~~ containing at least
identity of the software owner, offer parameters and the digital signature of the owner for at
least part of the offer, the control means ~~[[for]]~~ transmitting the offer ~~first~~ message to a
payment module of the terminal;

the payment module including ~~comprising~~:

receiving means for receiving the said offer ~~first~~ message,

display means for displaying the offer ~~first~~ message;

reception means for receiving ~~[[the]]~~ acceptance from ~~[[of]]~~ the user;

constituting means ~~of the payment module~~ for constituting a payment request second message requesting payment and ~~[[,]]~~ containing at least the identity of user and of the software owners together with proof that the user accepts the offer;

transmission means for sending said payment request second message from payment module to message and payment processing means;

reception means ~~of the payment module~~ for receiving a payment settlement third message, ~~which is a payment settlement message,~~ from the of message and payment processing system, ~~[[;]]~~ the payment settlement third message containing at least the identity of the of message and payment processing system and a digital signature constituting proof of payment;

transmission means for resending by the payment module said payment settlement third message to the control means;

verifying means for verifying by the control means digital signature constituting proof of payment against the offer parameters contained in the offer first message;

authorization means for authorizing continued ~~continuation of the~~ use of the software program upon ~~in case of~~ verification.
